# HEAVY DUTY CUTTING & HIGH ACCURACY

## SPINDLE

### Spindle for Heavy Cutting

The use of both cylindrical roller bearings and angular contact bearings provide high speed and rigidity. This enables machining of heavy workpieces. Also, LV8500 Series is with a gear box type spindle (Option), which provides high torque at low rpm and stability at high rpm.

### C-Axis Control ('M' Type)

The C-axis is capable of 0.001° control when milling turret is applied. Machining capability is strengthened with turning and milling operations.

### 2 Step Pressure Chucking Device **OPTION**

The 2 step pressure chucking system enables high pressure chucking during rough cutting and low pressure chucking during precision cutting.

### Chip Influx Protection

The LV8500 Series is incorporated with a protection device to keep chips and other foreign materials from entering the main spindle, ensuring long term high precision performance.

### Chute Structure

The sloped bed design improves chip flow and disposal of cutting fluids minimizing thermal displacement.

## LPS CHUCKING CONFIRMATION

### LPS (Linear Position Sensor) **OPTION**

Monitoring the clamping position of the chuck jaw and the status of clamping are possible with LPS.

This easy to use control feature improves safety and convenience during frequent workpiece changes.

## TURRET

Std. 12 Station

BMT 12 Station

### Servo Turret

The LV8500 Series' machining reliability is enhanced by incorporating a high performance AC servo motor to the turret drive mechanism.

Also, the turrets are installed with 3 piece couplings to improve indexing accuracy. Powerful hydraulic tool clamping exhibits great heavy duty machining performance by minimizing tool tip deviation due to work load.

### BMT Turret ('M' Type)

The BMT turret secures the tool with four bolts and key on the tool mounting surface of the turret, making it possible to powerfully fix the tool, ensuring high reliability in rigidity and precision.

STRAIGHT MILLING HEAD

ANGULAR MILLING HEAD

### Mill Tool Holder

Machining capability has increased with the addition of straight milling head tool holder, which can machine workpieces from the side, and angular milling head tool holder, which can perform I.D. operations.

### Special Tool

**OPTION**

The LV8500 series can process high value-added products using a variety of rotating tools. In particular, there is a multi-holder for attaching a variety of tools to one holder, and an eccentric rotary tool for handling eccentric parts without additional axis travel, which can realize integration of process with one machine.
